## **ABSTRACT**

This Study was carried out to investigate the relationship between study facilities and student's academic achievements in Public Secondary Schools. Five research questions were asked to give the study. Literatures were reviewed in areas related to the study including the theoretical framework which was based on the theory of pragmatism and some related concept framework and empirical studies. The Study was carried out in Osioma Ngwa Local Government Area of Abia Stat. The Study adopted a descriptive survey design. Data collected were analyzed using mean based on 4 pints scale of SA, A,D, and SD. Results showed that inadequacy and non availability of study facilities are the major causes or poor performance by students as well as teachers who do not teach with study facilities. Based on the findings, it was recommended that government should take education serious and ensure that adequate facilities are provided for schools to watch the number of students enrolled.
